

OCT 2016

Our business begun through a parent's concern for their child at its heart

Our journey began when I found out that my 1-year old son's eyes were not aligning as expected. An ophthalmologist diagnosed an accommodative esotropia caused by Hyperopia, also known as Long Sightedness.

He needed a high convex lens also known as a plus prescription and was required to wear an eye patch for amblyopia, more commonly referred to a lazy eye. My son refused to wear the glasses and the eye patch as they were uncomfortable for him. Not wearing his glasses, caused my sons symptoms and eye turn to worsen, so as a parent I needed to source glasses that he would wear.

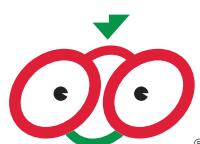

Unfortunately there was nothing in the market and I could not find a pair of frames that would fit him properly and with comfort as he had a small child's head with tiny infant features. I was very disappointed at this and decided that I would make glasses up for myself and my child if nobody else would.

This sparked the beginning of Tomato Glasses: a company and product born out of the affection and love I have for my child.

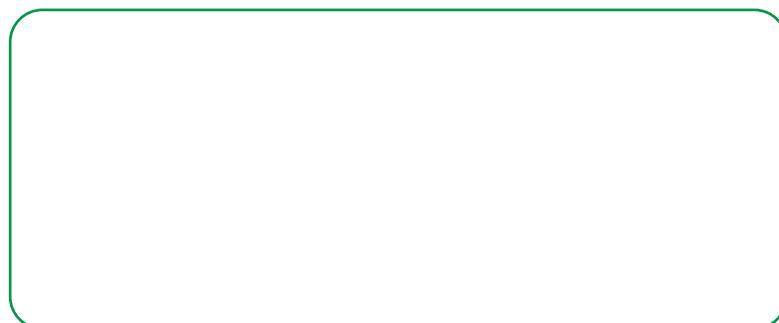

My son has worn theseglasses ever since and has also had a successful surgery to cure his condition. I am so glad that I did not give up on getting my son suitable glasses and I instead created a p created a product that so many children can now use and love as much as my son did.

I want other parents and children in the same situation to feel the same happiness and feelings that I felt when I found and created the perfect pair of glasses.

We, Tomato Glasses, will continue to make children's frames so that we can make children and their parents happy.

Non-slip! Safe! Adjustable!

As Tomato Glasses, we manufacture glasses for babies and children.

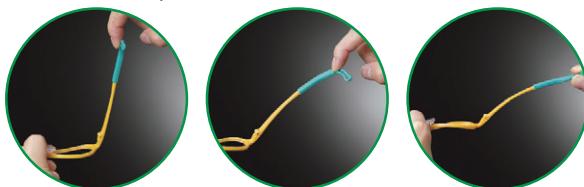

As a father of a child who wears glasses, I understand that all parents want the best for their children. I believe that the frames we have created will make both parents and children happy.

TOMATO Glasses Features

1 Firm Glasses

- ① The glasses frames are made using non-toxic materials that are approved by the FDA.
- ② The frames are easily flexible, display excellent elasticity and do not break easily.

2 Comfortably fitting glasses

- ① The frames are incredibly light: only 6 to 9g in weight.
- ② There is a cushion on the tip of the frames that matches the complex curves of the ears and will not press on them.

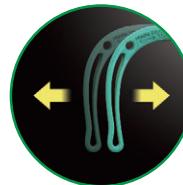

3 Non-slip Glasses

The bridge of the glasses matches the curve of the nose well and thus, holds the glasses comfortably in place and prevents them from slipping down.

4 Adjustable temple lengths

It is easy and simple to adjust the length of the temples. To shorten them, remove the ear tip and cut off the excess length. Replace ear tips and secure these in position using the screws. To lengthen the temples, pull the ear tips back and secure in place with the screws.

5 Adjustable nose pad heights

The nose pads can be attached to three points of the frame (five points on the baby range frames.). As every child's face is unique, this feature allows the correct placement and height for each child can be achieved.

6 A standard head strap

All frames from Tomato Glasses come with an attachable strap as a standard accessory. When attached, the strap prevents the glasses from slipping even with high-power lenses. They provide security when actively running and jumping, making Tomato Glasses great sports glasses. Also, they are perfect for children with sensitive ears.

TOMATO GLASSES
Baby A

This is the collection of frames for children aged up to one year old who require glasses. The 35-15 frame is recommended for newborn babies up to approximately 3 months old whilst the 37-13, 39-14 frames are for babies aged approximately 3 months old to 12 months.

As a baby's face will change and grow during their first year, the TBAC range is highly adjustable and allows for these changes. The TBAC frame can be used with high-powered lenses from -25 diopters to +33 diopters.

The frames can be adjusted along the horizontal and vertical axes. Three positions are available between the eye and lens and five positions can be achieved through the movement of the bridge. The comfortable ear tips and head strap ensures that the frame will remain in place whilst babies are lying or breast feeding.

TOMATO GLASSES
Kids A

A range for children aged around 1 year to 7 years old.
We have designed this oval shaped frame to minimize the lens area, hence reducing the thickness and weight of the glasses. To appeal to children, we have used bright colours and applied illustrations on the side of the arms. This range has been the bestselling product that Tomato Glasses has created.

TOMATO GLASSES
Kids B

「■▲●」 design story

CEO Sungjoon Kim

We know that many children that wear glasses are suffering from inconveniences and troubles in their daily life. Because of this, we designed glasses with a triangle, square and circle on the temples so we can comfort them from any trouble, even in just a small way.

We, from the point of fathers, want the children to understand mathematics, science and natural sciences by familiarising them to the square, triangle and circle shapes – this way, we can help them to grow up wiser and better.

TOMATO GLASSES

Junior A·B

Junior A

A range for children aged from around 8 years old up to teenagers. We have adopted a rectangular shaped frame front designed for people wishing to sport a sophisticated and smart image. Within the TJAC range, larger-sized frames are available and it is possible for families to create a similar look with matching glasses.

Junior B

A range for children aged from around 7 years old up to teenagers. This circular frame is designed in a retro-style to create a casual and comfortable image when worn. Within the TJBC range, larger-sized frames are available and it is possible for families to create a similar look with matching glasses.

Optimal Fitting Kit

Further research has indicated the need to cater for a variety of nose shapes. For this reason, we have introduced two new fits along with the two existing designs. We are now introducing the new Asian A fit and the Caucasian W fit designs.

Despite the pieces having specific design fits, it must be noted that on occasion an Asian child may require the W fit depending on their nose shape.

Along with this we have introduced a new storage case, that has been created to store all 9 sizes and types of nose pads.

they consist of the 3 nose pads for BabyA, and 6 nose pads for the Kids and Junior ranges.

This allows optometrists and opticians to have all the tools necessary to individually and custom fit every child appropriately hence offering the best customer service.

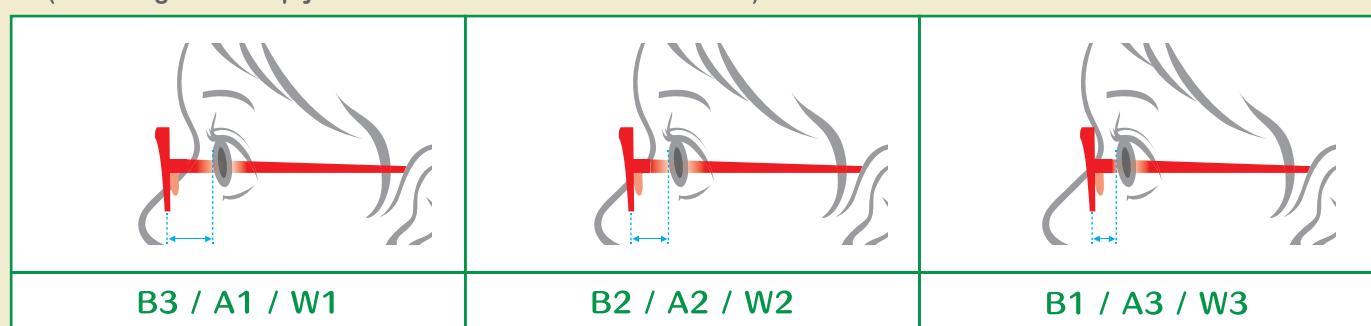

● Default Nose Pads Installed With Tomato Glasses Frames

Asian Type	3 Type(A1·A2·A3)
Western Type	3 Type(W1·W2·W3)

The Relationship Between the Types of Nose Pads and Fitting Results (This image is to help you better understand the connection)

※ If the nose pads' width gets wider, the distance between the lens and pupils get narrower. If the distance between the pupils and lens look farther apart, then replace the nose pads with the higher number ones. (For the infants(B1, B2, B3), please replace it with the lower number ones.)

Tomato Glasses are a specialized brand of Children' s glasses.

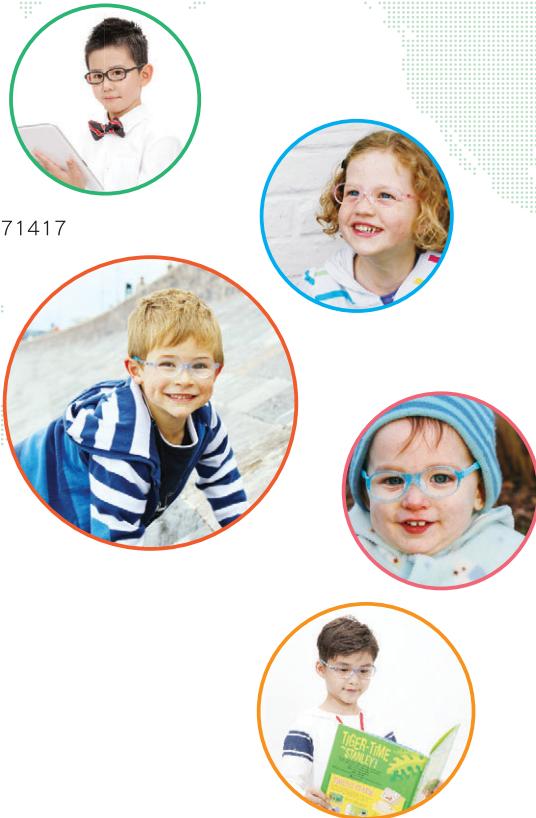

We supply frames to children in 18 countries.
